

Birth of the superb spicule-cosmetics from advanced research

inospicule

The general term for natural-spicules extracted from marine organisms and sponges is called spicule. It has been used as beauty material for about 60 years ago. The aim of its application was that spicules can enhance permeation to the skin. However, in the conventional refining process, always some organic substances remained and these could bring negative effects, so it can only be used for limited purposes.

"Inospicule" succeed in refining of the spicules that are very close to 100 % purity with a unique manufacturing process that is called "low-sound high-pressure enzyme decomposition method". Silica spicules with no organic substance at all can work on your skin comfortably and nurture your beauty.

Inospicule

Each spicule has countless holes. By taking advantage of the characteristics of those holes, we filled the holes with useful ingredients for further coating. After spicules reaching the skin, those useful ingredients are delivered to the skin for a long time.

The ingredient of the inospicule itself is silica, so the needle itself is a beauty mineral. After delivering useful ingredients to the skin, Inospicules are discharged 100% from the body, so it's gentle to use without any problem.

inospicule

Skincare system

1. Permeation of Inospicules.

Inospicules permeate to the horny layer,

2. Preparing the skin environment

Inospicules work on the horny layer.

The umbilical cord blood is the blood in umbilical cord that connects a mother body and a fetus.

Collect carefully selected umbilical cord blood. There are 89 kinds of proteins in umbilical cord blood. It has growth factors.

Ingredients secreted from cultivated stem cells that were collected from the umbilical cord blood

Because it is dried after freezing, it can maintain the freshness of ingredients.

How to use V3 Exciting Foundation

In order not to spoil the benefits of inospicules, please pat gently like patting.

Apply it to the whole cheek in the following order:

- ① From the chin to under the ear
- ② From the nostrils to the ear
- ③ From the inner corners of eye to the temple

The point is to pull it up tightly at the end. After that, apply it to the forehead and small parts.

Finally, if you can care from under the chin to the parotid glands, It is effective for skin resilience.

*Please refrain from using anything other than your face.

*It contains natural-spicules, but the everyday-use foundation has a less tingling feeling structure

*Please refrain from using it if your skin is not in good condition.
